We fabricate high quality roofing blankets seen everywhere from Jack-Leg site offices, to residential housing, to entire hospitals and everything in between.

Who are we?

Since 1956, Stephens Industries has been a market leader in protecting property, products, people, and the environment against harmful or wasteful spillage and leakage. Our experience covers a diverse range of sectors, from modular building construction, to the nuclear industry and more.

In previous years, Stephens Industries has been required to provide a roofing solution for an almost endless list of roof designs; it is from this experience that we can be confident in meeting your needs.

Roofing System

As a crucial element of any building, and especially in the case of modular buildings, the type of roofing used must allow for optimum construction efficiency.

Elevate EPDM

Multiple grades available, RubberGard 1.14mm LSFR and temp 1.00mm EPDM.

Quick and easy installation, use with purpose made Elevate accessories for quick and easy installation without the need for specialist equipment or on-site electricity.

Lightweight, prefabricated blankets cut to almost any size for ease of use.

Elevate EPDM offers incredible UV and weather resistance resulting in a longer expected life.

Elevate EPDM remains flexible down to -45°C and can elongate over 300%, resulting in a roofing solution that can adapt to changes in building movement and temperature.

With little to no maintenance required, and incredible durability characteristics the lifetime cost of an Elevate EPDM roofing system is very low.

Elevate EPDM is manufactured in a factory with ISO 14001 certification for its environmental management systems. Furthermore, as an inert material, EPDM has limited environmental impact during product use.

Stephens 0.5mm PVC

If a more temporary option is required, we also offer a 0.5mm blanket in PVC.

A smooth, pure black, shiny finish means PVC pond liner provides a clean neat look.

Our PVC's composition has been designed in order to achieve the best UV resistance possible to provide a long life.

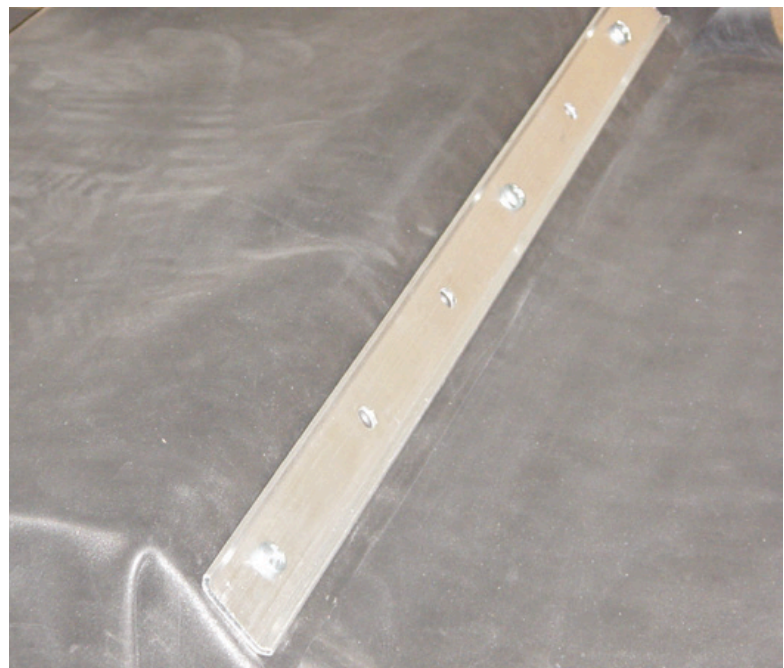

Being thinner than the EPDM rubber blankets we supply, PVC pond liner is highly flexible so can be manipulated.

Compared to many other economy blankets, PVC has a good puncture resistance.

Components and Accessories

Elevate Roofing and QuickSeam Accessories have been developed as a comprehensive range of accessories designed specifically for use with Firestone EPDM in order to provide a truly versatile and easy to use roofing system.

As well as this, we have a range of specialist tools to aid the installation of these products and also QuickTrim gutter and edge trims to give that professional finish.

Technical Support

As a leading distributor of Firestone modular roofing, and a steadfast commitment to quality we work closely with our customers to ensure they are fully trained and confident in installing Firestone Roofing Membranes.

As part of this support we are able to provide customers with training days held at regional locations as well as a comprehensive range of literature including detailed CAD drawings, detailed technical specifications guides, and product data sheets.

With EPDM's superior durability, quick and easy installation, high flexibility and low life-cycle cost, it's no wonder that more businesses are turning to Stephens Industries for solutions to their roofing needs.

Transit Sheets

Stephens Industries modular covers provide high-quality protection for buildings, both during transport and while in storage.

Our transit sheets have a unique design with internal straps and one ratchet per side meaning they are:

- Easy to install/ remove leading to faster turnaround times
- No flapping of straps in high winds
- Even spread of tension, meaning a reduced likelihood of tearing
- Neat, professional finish
- Reusable and long-lasting, reducing your carbon footprint
- Lengths and ends can be mixed and matched depending requirements

How can we help you?

DESIGN & DEVELOPMENT

Our design team can work with you to provide a solution that works with your module design (either sides, ends or full covers), is easy to use and protects your modules in transit.

MATERIALS

We can help specify and supply items in a variety of specialist materials including standard and fire retardant PVC's

MANUFACTURE

Our highly skilled in-house team can manufacture all elements of your cover, from CAM plotting and cutting, to sewing and welding, ensuring the quality of our products, and keeping timescales as short as possible

All our products are manufactured in UK to ISO9001:2015 standards so you can be sure of the quality of our goods.

We've been working with the modular industry for over 25 years.

All our covers are customisable to your specific requirements.

CONTACT US

If you would like to know more about any of our products or services, or if you would like to request a quote, please contact us by phone, or email, given below, where our dedicated customer service team will be happy to help.
